EXPECTED OUTCOMES

The project will help enhance the **development of students' and staff key competences and skills.**

Higher education institutions and policy makers at the European level will be more aware of the positive effects of the different types and lengths of mobilities on students' key competences and will **adapt their internationalization strategies** accordingly.

Universities will be able to **complement their academic offer with blended mobility.** They will modernize their **infrastructures** and develop i**nnovative teaching methods and material.**

The project will lift obstacles to mobility by developing VM and BM. This will allow to **meet and exceed the target of 20% of students going on a mobility (Bologna Process)** and also **allow students that have fewer opportunities** (due to their economic or social background, or physical impediments) **to take part in a mobility, thus fostering the inclusion of all students.**
